Device for carrying a child

5

Technical field

The invention relates to a device for carrying a child in seated position upon the shoulders of an adult. The device comprises a seat section partly encircling the neck of the adult, and a leg section reaching down over the chest of the adult.

10

Background Art

15

20

25

30

35

Children and infants are often carried by adults, normally their parents, where the child is seated upon the shoulders of the adult. The most common way of doing this is by the adult holding on to the child's hands or for an older child on to his feet. Numerous devices have been described whereby children can be carried by a large person such as parent or other adult. One type of carrier is designed to carry the child papoose-style on the back of the adult, employing devices similar to camper's backpacks. The papoose-style carrier is well suited for carrying infants for a relatively long period of time. For older children, who need to be carried for a shorter period of time or need a better viewing position, a shoulder-mounted carrier is preferable.

In U.S. Patent No. 4.915.277 a holder with a saddle seat is positioned against the adult's upper thigh. In U.S. Patents No. 3.968.910, 4.416.403 and 4.484.700 a shoulder mounted seats for infants and children are described. The design enables the child to be seated upon the shoulder of the adult with his legs straddling the adult's neck and extending downwardly upon the chest region of the adult. Those seats are designed of collapsible structure enabling easy carrying when not in use. In U.S. Patent NO. 5.335.834 a carrying seat is introduced, comprising an integral inflatable structure fabricated of flexible polymeric sheet material. The carrying seat is made of a main portion of a horseshoe or U-shaped contour, having an

inflation valve, an arcuate rear region, opposed leg portions forwardly disposed from said rear region, and upper and lower surfaces. An abutment member is upwardly emergent from said upper surface in said region adjacent to said interior seam. The carrying seat is of substantially symmetrical shape with respect to plane orthogonal to said upper and lower surface and bisecting said rear portion in parallel relationship to said leg portions.

The design as introduced in U.S. Patent No. 5,335,834 is in many ways advantageous over its prior art, however there are still many disadvantages employed with its use. The two main disadvantages are that the seat section does not support the correct upright sitting posture of the child and secondly that the weight of the child is not correctly carried by the adult.

Extension of the lumbar spine is believed to be beneficial as compared to flexion of the lumbar spine as a result in lower intradiscal pressure. The natural upright curvature of the spine can only be adopted when the pelvis is in the neutral or slightly anterior tilted position. Research has indicated that forward inclination of seats between 4-10° (degrees) ensure adequate extension of the lumbar spine through anterior tilting of the pelvis. Furthermore, increased lumbar extension has as an added effect that the thoracic spine becomes more vertical which in turn can enhance breathing.

Disclosure of the Invention

The object of the invention is to provide a device for carrying a child in seated position upon the shoulder of an adult where a correct upright sitting position of the child is encouraged and the weight support of the adult is carried as correctly and ergonomically as possible by the adult.

The device according to the invention comprises a configuration for carrying a child upon the shoulder of an adult where a seat section partly encircles the neck of the adult and a leg section reaching down over the chest of the adult, characterized in said seat section being a cushion saddle and the leg

section having stirrups for the child's feet, said stirrups carrying at least partly the child's weight.

The invention is further unique according to the characteristic part of the patent claims 2-6.

Brief Description of the Drawings

The invention is explained in greater details below with reference to the accompanying drawings in which;

Figure 1 shows a front side view of the device,

Figure 2 shows a side view of the device,

Figure 3 shows a cross sectional cut A - A from fig. 1,

Figure 4 shows a child seated upon the shoulder of an adult using the shoulder seat device, and

Figure 5 shows a child seated upon the shoulder of an adult without the support of the device.

More detailed Description of the Drawings and one presently preferred exemplary embodiment of the Invention

The seat configuration as illustrated in figure 1 - 3 is comprised of an inflatable main portion (21), forming the seat for carrying the child. The main portion of the device or the so-called seat section (21) is preferably made of any kind of flexible sheet material. The material is preferably sewed and/or welded together to form an inflatable main portion. The seat section (21) has a horseshoe-like or semi-circular contour. The leg sections (22) extend from the non-inflatable end portion (7) of the seat section (21) and form a

kind of stirrups (12) for the child to place its feet in. The seat section's inner part (5) forms about or little more than 3/4 of enclosed circle. Thereby the device partly encircles the neck of the adult when in use. The leg section is secured to the non-inflatable end portion (7) of the seat section by metal eye (8) where the upper strap (9) portion of the leg section is fastened to. The length of the leg section is adjustable by strap length adjuster's (10) allowing individual adjustments for the optimal comfort for the child and the adult carrying the child. A footrest or stirrups (12) are arranged at the end of the leg section. The stirrups are connected to the length adjuster's (10) by lower straps (11).

In figure 4 - 5 the sitting posture of a child seated upon the shoulder of an adult (25) is illustrated. In figure 4 the child (24) is supported by the cushion saddle seat (1) and is situated in a correct upright position with his back spine (26) as close as possible to a vertical alignment.

Figure 5 illustrates the typical sitting posture of a child (24) seated upon the shoulder of an adult (25) having no support. The child's back spine is curved and the sitting position is abnormal. The two figures illustrate clearly the difference in the sitting posture of a child with or without the aid of the cushion saddle seat. By using the device the sitting posture of the child (24) will be much more natural and ergonomic as well as it is much easier for the adult (25) to carry the child.

The invention described here above is not limited to precisely those details which have been specified, but can be elaborated upon in many ways without deviating from the central concept and spirit of the invention as defined in the patent claims below.

Patent Claims

1. A device for carrying a child (24) upon the shoulder of an adult (24), comprising; seat section (21) partly encircling the neck of the adult, and a
5 leg section (22) reaching down over the chest of the adult, the seat section (21) being a cushion saddle (1) wherein the leg section (22) having stirrups (12) for the child's feet, said stirrups carrying at least partly the child's weight.
- 10 2. Device according to claim 1, wherein the upper surface (1) of the seat section (21) being forwardly inclined with respect to horizontal plane.
- 15 3. Device according to claim 1, wherein in the thickness of the seat section is decreasing in direction toward the leg section (22).
- 20 4. Device according to claim 1, 2 or 3, wherein in that the inclination of the seat section being about 4 - 10° with respect to horizontal plane.
- 25 5. Device according to claim 1, wherein in that the leg section (22) length being adjustable.
- 30 6. Device according to any one of the claim 1 - 5, wherein in that the inner part (5) of the seat section (21) is semi-circular and at least partly encircle the neck of the adult.

2. Citations and explanations (Rule 70.7)

The invention related to a device for carrying a child in seated position upon the shoulders of an adult. The device comprises a seat section partly encircling the neck of the adult, and a leg section reaching down over the chest of the adult.

It should be emphasized that by introducing the device disclosed in the above identified application it is now - possible in a relatively simple and cost effective manner to provide an adult as well as a child with a device being ergonomically safe, encourage bio-medically and anatomically correct sitting posture. And it is easy to use.

In the cited NO-A-302994 patent no suggestion is made, or for that reason implied, that the effect of the foot support is anything other than to diminish the pressure on the popliteal fossa. The device is proposed for papoose-style carrying of the child on the back, not on the shoulder of the adult.

In the cited US-A-5335834 a carrying seat with integral inflatable structure is introduced. The, 834 patent does not teach the use of stirrups to support the correct upright sitting position of the child as well as the correct weight support of the adult.

.../...

Supplemental B x

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: V.

The applicant has submitted amended claims.

The above mentioned documents only describe the prior art.

They do not show the features in the characterising part of claim 1, i.e. that the leg section having stirrups for the child's feet which stirrups carry at least partly the child's weight and thereby enhancing the upright sitting posture of the child.

Claims 1 to 6, therefor, fulfil the requirements of novelty, inventive step and industrial applicability as prescribed by Article 33 PCT.

Check-boxes reserved for designating States (for the purposes of a national patent) which have become party to the PCT after issuance of this sheet:

☒ **South Africa**

Precautionary Designation Statement: In addition to the designations made above, the applicant also makes under Rule 4.9(b) all other designations which would be permitted under the PCT except any designation(s) indicated in the Supplemental Box as being excluded from the scope of this statement. The applicant declares that those additional designations are subject to confirmation and that any designation which is not confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. (Confirmation of a designation consists of the filing of a notice specifying that designation and the payment of the designation and confirmation fees. Confirmation must reach the receiving Office within the 15-month time limit.)

Box No. VI PRIORITY CLAIM		<input type="checkbox"/> Further priority claims are indicated in the Supplemental Box.		
Filing date of earlier application (day/month/year)	Number of earlier application	Where earlier application is:		
		national application: country	regional application:* regional office	international application: receiving Office
item (1) 11.03.1999	4997	Iceland		
item (1)				
item (1)				
<input checked="" type="checkbox"/> The receiving Office is requested to prepare and transmit to the International Bureau a certified copy of the earlier application(s) (only if the earlier application was filed with the Office which for the purposes of the present international application is the receiving Office) identified above as item(s): _____ <i>* Where the earlier application is an ARIPO application, it is mandatory to indicate in the Supplemental Box at least one country party to the Paris Convention for the Protection of Industrial Property for which that earlier application was filed (Rule 4.10(b)(iii). See Supplemental Box.</i>				
Box No. VII INTERNATIONAL SEARCHING AUTHORITY				
Choice of International Searching Authority (ISA) <i>(If two or more International Searching Authorities are competent to carry out the international search, indicate the Authority chosen; the two-letter code may be used):</i> ISA / SE		Request to use results of earlier search; reference to that search (if an earlier search has been carried out by or requested from the International Searching Authority): Date (day/month/year) Number Country (or regional Office)		
Box No. VIII CHECK LIST; LANGUAGE OF FILING				
This international application contains the following number of sheets: request : 3 description (excluding sequence listing part) : 4 claims : 1 abstract : 1 drawings : 2 sequence listing part of description : Total number of sheets : 11		This international application is accompanied by the item(s) marked below: 1. <input checked="" type="checkbox"/> fee calculation sheet 2. <input type="checkbox"/> separate signed power of attorney 3. <input type="checkbox"/> copy of general power of attorney; reference number, if any: 4. <input type="checkbox"/> statement explaining lack of signature 5. <input type="checkbox"/> priority document(s) identified in Box No. VI as item(s): 6. <input type="checkbox"/> translation of international application into (language): 7. <input type="checkbox"/> separate indications concerning deposited microorganism or other biological material 8. <input type="checkbox"/> nucleotide and/or amino acid sequence listing in computer readable form 9. <input type="checkbox"/> other (specify):		
Figure of the drawings which should accompany the abstract: 4		Language of filing of the international application: English		
Box No. IX SIGNATURE OF APPLICANT OR AGENT				
<i>Next to each signature, indicate the name of the person signing and the capacity in which the person signs (if such capacity is not obvious from reading the request).</i> <div style="text-align: center;"> A&P Arnason  Gunnar Orn Hardarson </div>				

For receiving Office use only		2. Drawings: <input type="checkbox"/> received: <input type="checkbox"/> not received:
1. Date of actual receipt of the purported international application:		
3. Corrected date of actual receipt due to later but timely received papers or drawings completing the purported international application.		
4. Date of timely receipt of the required corrections under PCT Article 11(2):		
5. International Searching Authority (if two or more are competent): ISA /		6. <input type="checkbox"/> Transmittal of search copy delayed until search fee is paid

For International Bureau use only	
Date of receipt of the record copy by the International Bureau:	

29-05-2001

New set of amended Patent Claims (amendments to claim 1 made in accordance with response sent 8 March are made in bold)

1. A device for carrying a child (24) upon the shoulder of an adult (24), comprising; seat section (21) partly encircling the neck of the adult, and a leg section (22) reaching down over the chest of the adult, the seat section (21) being a cushion saddle (1) **characterised in that** the leg section (22) having stirrups (12) for the child's feet, said stirrups carrying at least partly the child's weight **and thereby enhancing the upright sitting posture of the child.**
2. Device according to claim 1, wherein the upper surface (1) of the seat section (21) being forwardly inclined with respect to horizontal plane.
3. Device according to claim 1, wherein in the thickness of the seat section is decreasing in direction toward the leg section (22).
4. Device according to claim 1, 2 or 3, wherein in that the inclination of the seat section being about 4 - 10° with respect to horizontal plane.
5. Device according to claim 1, wherein in that the leg section (22) length being adjustable.
6. Device according to any one of the claim 1 - 5, wherein in that the inner part (5) of the seat section (21) is semi-circular and at least partly encircle the neck of the adult.

Patent Claims

1. A device for carrying a child (24) upon the shoulder of an adult (24), comprising; seat section (21) partly encircling the neck of the adult, and a
5 leg section (22) reaching down over the chest of the adult, the seat section (21) being a cushion saddle (1) wherein the leg section (22) having stirrups (12) for the child's feet, said stirrups carrying at least partly the child's weight.
- 10 2. Device according to claim 1, wherein the upper surface (1) of the seat section (21) being forwardly inclined with respect to horizontal plane.
- 15 3. Device according to claim 1, wherein in the thickness of the seat section is decreasing in direction toward the leg section (22).
- 20 4. Device according to claim 1, 2 or 3, wherein in that the inclination of the seat section being about $4 - 10^\circ$ with respect to horizontal plane.
- 25 5. Device according to claim 1, wherein in that the leg section (22) length being adjustable.
- 30 6. Device according to any one of the claim 1 - 5, wherein in that the inner part (5) of the seat section (21) is semi-circular and at least partly encircle the neck of the adult.
